

ALL-IN-ONE FINANCIAL SOLUTION TO **FUEL** **YOUR GROWTH**

FUEL

WHAT WE LEARNED ABOUT WILDCARD SO FAR

1 Cash & accrual are mixed

The directional model exists — but blended cash/accrual means you can't fully trust the numbers

2 AR reconciliation is 100% manual

Every invoice goes through Stripe but ACH payments land directly in the bank. Brennan manually checks which invoices are paid, flags overdue — no automated matching or alerts.

3 Campaign COGS live in the product DB — not in finance

No per-client or per-campaign margin view — you can't see which revenue is actually worth it

4 All financial data flows through Brennan today

The forecast model, AR tracking, COGS averages, invoice reconciliation, CC classification — all live in Brennan's head or require his manual input. No exec team visibility.

5 CC transactions have no classification system

Campaign costs hit Amex/credit cards. Accountants classify what they recognise (~80%) and send Brennan a spreadsheet for the rest. No systematic rules, no automation.

• Goal

**CASH VISIBILITY, FORECAST YOU CAN TRUST,
AND PROFITABILITY THAT SCALES WITH
WILDCARD FROM 15 TO 22+ 🚀**

CHALLENGES

01

One model, no separation of cash vs. accrual

Brennan's forward-looking model blends cash payments (Vectric quarterly bill) with accrual-based estimates (avg COGS per campaign). Gross margin is directionally useful but can't be fully trusted — and there's no live cash balance view.

→ Fuel separates the cash flow view from the accrual P&L, connects the bank to QBO, and automates the weekly cash position — so Brennan sees real numbers without touching the model.

02

Invoice reconciliation is fully manual

All invoices go through Stripe, but customers pay via ACH direct deposit. Stripe doesn't auto-match the payment to the invoice. Brennan manually checks every invoice to flag late payments — with 25 customers across retainer and per-meeting billing, this breaks at scale.

→ Fuel connects the bank feed to the accounting system to auto-match payments to invoices, flags overdue AR by day-count (3d / 5d / 10d), and builds the process so Brennan's team owns it — not just Brennan.

03

Campaign COGS exist in the DB — but don't flow into finance

Every campaign item has a real \$ value stored in Wildcard's internal platform, queryable by campaign code. But connecting those COGS to Stripe revenue and the P&L is unsolved. Per-campaign and per-customer profitability is unknown.

→ Fuel connects to Wildcard's product DB via the existing MCP structure, maps campaign codes to customer revenue in Stripe, and builds true per-customer and per-campaign margin visibility — replacing the \$250 average with actuals.

**HOW FUEL CAN 😊 HELP
WILDCARD?**

OUR APPROACH – TWO PHASES

Phase 1: Now → Month 2

Immediate wins.
FP&A manager by your side.

- Cash flow automated across Chase, Amex & Stripe
- Financial model rebuilt — client & campaign profitability
- AR auto-matched: Stripe invoices → bank deposits
- Weekly plan vs. actual with red/green cash alerts
- Dedicated FP&A manager in Slack — your in-house finance person

Phase 2: Month 3+

Full platform.
Real-time dashboard.

- Real-time dashboard: cash, AR, gross margin live
- Campaign-level P&L — margin per client, per campaign type
- Hiring model: what does 18, 20, 22 people cost?
- Exec KPI ownership: sales director & CS numbers in the system
- CFO layer for every strategic & hiring decision

Phase 1 fixes cash visibility and AR. Phase 2 connects the full picture so the whole team owns the numbers.

PHASE 1

**NEXT
2 MONTHS**

What we build first

PHASE 1 – WHAT'S INCLUDED

First priority: cash visibility, AR automation, and a forecast model Brennan can trust.

Cash Flow & Financial Model

- Cash & accrual separated — live bank view connected to QBO
- AR auto-matched: Stripe invoices → bank deposits, overdue flagged
- Forecast rebuilt: campaigns × price × meeting conversion rate
- Weekly plan vs. actual — red/green cash alerts
- Headcount & hiring model built into the forecast

AR Automation & Reconciliation

- Stripe invoice matched to bank ACH — auto-reconciled
- AR dashboard: overdue by 3d / 5d / 10d with alerts
- Per-customer view: retainer vs. per-meeting billing
- Process built so the team owns AR — not just Brennan
- CC classification rules set — accountant handoff fixed

Weekly Business Updates

- Dedicated FP&A manager in Slack — always on
- Weekly 30-min check-in with Brennan
- Proactive red/green flags — hear about gaps early
- Monthly close started: from 25+ days toward 15
- Soft close: 80% accuracy by Day 5

INTEGRATE, ANALYZE, ACT

We connect Stripe (invoicing), QBO (bookkeeping), Wildcard's product DB (campaign COGS), and the bank feed (ACH payments) into one place. No more manual invoice reconciliation. No more \$250 COGS averages. No more Brennan being the single point of contact for financial data.

ONE SINGLE SOURCE OF TRUTH FOR ALL STAKEHOLDERS

One unified view of Stripe, Chase, Amex, and QBO — no more manual reconciliation

Revenue by client, by campaign type, by success fee vs. project fee

Automated dashboards live in days — cash position and AR status updated daily

FINANCIAL DATA

PROFIT & LOSS, \$

Gross profit & Gross profit margin

REVENUE GROWTH VS COGS GROWTH

P&L WATERFALL, \$

RUNWAY

BEFORE FUEL

- Chase, Amex, and Stripe are completely separate
- Success fee invoices tracked manually — AR always lagging
- Campaign costs not mapped to revenue — no margin view
- Cash vs. accrual mixed — model hard to trust
- Brennan manually pulls cash data every other week
- No real-time view of cash or upcoming obligations

WITH FUEL

- AR automated — every invoice tracked, overdue flagged
- Campaign margin visible — per client, per campaign type
- Cash vs. accrual separated — model you can trust
- Brennan focuses on growth, not finance ops
- Live cash position — proactive gap alerts

REVENUE DATA

Which client — and which campaign type — is actually most profitable?

What's the revenue trend by client vs. last quarter?

What's the margin on project fees vs. success invoices in real time?

PHASE 2

MONTH
3+

Full platform. Real-time dashboard.

PHASE 2 – WHAT'S INCLUDED

Phase 2 unlocks per-campaign profitability and gives the whole exec team financial ownership.

Real-Time Dashboard

- One live view: cash, AR, gross margin, per-client P&L
- Campaign COGS from Wildcard DB — actuals, not averages
- Revenue vs. plan — Stripe actuals, updated automatically
- Sales director & CS KPIs live — exec team owns numbers
- One click from any metric to the underlying transaction

Unit Economics & Profitability

- True per-campaign COGS — replace \$250 avg with actuals
- Per-customer profitability: retainer vs. per-meeting
- Gross margin per customer — which clients drive margin
- Scenario model: what does hiring 18, 20, 22 cost?
- Cash runway: safe to hire decision backed by numbers

Clean P&L + CFO Layer

- Accrual P&L rebuilt with KPIs Brennan actually uses
- Monthly close accelerated: 25+ days → 10–15 days
- CO classification automated — no manual ask
- Forecast vs. actual for every exec-owned metric
- CFO for every hiring & strategic decision

S&M DATA

Wildcard is growing fast. You need to know which deals are worth closing. We give you the data to decide — from month one.

Campaign ROI — which campaigns convert and at what margin

Revenue vs. Plan — weekly actuals vs. forecast by client segment

Cost Per Acquisition — which outbound motion is actually working?

Pipeline + Won Revenue — by client type and campaign size

FORECASTING

See cash in, cash out, and AR status week by week. Know today what the cash position looks like as Wildcard grows from 15 to 22 people — and when each hire is actually safe to make.

Multiple scenarios built around Wildcard's real campaign volume, conversion rates, and cost structure. Brennan can finally answer:

"If we bring on 3 more headcount in Q3 and a client expands their contract, what does cash look like in December?"

AI FINANCIAL SUMMARIES

Smarter reporting, instantly

Tried uploading your data to ChatGPT and got a wall of vague text? That's because real financial context needs structure — and expert review. That's what Fuelfinance delivers.

Fuel goal: Clear, concise summaries you can actually use — with full confidence that nothing important gets missed.

During your monthly review, you no longer spend time pulling and formatting data. We summarize everything for you.

AI COPILOT

Ask any financial question in plain English — from “what drove the margin drop in February?” to “what happens to our runway if we hire 5 people in Q2?”.

The AI Copilot queries your real company data, models hypothetical scenarios, and instantly surfaces action-oriented answers — tailored for Brennan — the headline answer fast, with the full detail one click away.

Fuel MCP exposes your financial models, forecasts, and business context through the Model Context Protocol, allowing AI to reason directly on top of trusted company data.

Ask anything. Model scenarios.
Generate reports. Make decisions faster.

SETUP ROADMAP

Phase 1 Launch

Month 1

- Kick-off + data access: Stripe, Chase, Amex, QBO
- Financial model v1 live
- Cash flow model built and running
- AR tracking automated for 20+ clients
- Weekly dashboard MVP running

Phase 1 Running

Month 2

- Plan vs. actual — full weekly cadence
- Campaign profitability model complete
- Expense classification from CC transactions
- Hiring decision model live — 15 → 22 mapped
- Soft-close process introduced

Phase 2

Month 3+

- Full platform: all integrations automated
- Real-time dashboard live for all KPIs
- Scenario forecasting best / realistic / worst
- Monthly close: 25 days → 10–15 days
- CFO layer active for strategic calls
